Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters.Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a

Answer

```
#include <stdio.h>
#include <stdlib.h>

struct Node {
   char item;
   struct Node* next;
   struct Node* prev;
};

void insertAtEnd(struct Node** head, char item) {
   Node *position;
   Node*newnode=(Node*)malloc(sizeof(Node));
   newnode->item=item;
   newnode->next=NULL;
   newnode->prev=NULL;
   if(*head==NULL){
      newnode->prev=*head;
      *head=newnode;
   }
```

```
    else{
        position=*head;
        while(position->next!=NULL){
            position=position->next;
        }
        position->next=newnode;
        newnode->prev=position;
    }
}
void displayForward(struct Node* head) {
    if(head!=NULL){
        Node*position=head;
        while(position!=NULL){
            printf("%c ",position->item);
            position=position->next;
        }
        printf("\n");
    }
}

void displayBackward(struct Node* tail){
    Node* position=tail;
    while(position!=NULL){
        printf("%c ",position->item);
        position=position->prev;
    }
    printf("\n");
}

void freePlaylist(struct Node* head) {
    Node *temp=head;
    free(temp);
}

int main() {
    struct Node* playlist = NULL;
    char item;

    while (1) {
        scanf(" %c", &item);
        if (item == '-') {
            break;
        }
```

```
        insertAtEnd(&playlist, item);
    }

    struct Node* tail = playlist;
    while (tail->next != NULL) {
        tail = tail->next;
    }

    printf("Forward Playlist: ");
    displayForward(playlist);

    printf("Backward Playlist: ");
    displayBackward(tail);

    freePlaylist(playlist);

    return 0;
}
```

Status : Correct **Marks : 10/10**
